

FORM FORMAT:

Name:			Age:							
ART start date:			ARV drugs:							
Visit Date	Wgth	Adhr	Symptoms							
			Fever (F)	Nausea (N)	Headache (H)	Oral thrush	Rash/skin lesion	Blurred Vision	Rapid heart rate	Other
Cough (C)	Vomit. (V)	Stiff Neck (S)								
			Shortn. breath (S)	Diarrhea (D)	Confusion(C)					

Hey guys,

Here is my addition to Jina's chart. I thought that it would be helpful to include the name, age, ART start date and ARV drugs at the top.

Also I grouped some of the most common symptoms together. The first column (Fever, cough and shortness of breath may appear because of opportunistic pneumonias and TB). The worker can mark down F for fever if the patient only has fever, C for cough if the patient is coughing and S if they are also short of breath. The second column is dedicated to side effects of lactic acidosis. The third column is for meningitis. And the others were more or less already there.

Jelena

Tell me what you think.
