Problem Wk.2.2.6: Distance from point to line

Define a procedure `perpDist(px, py, a, b, c)` that returns the unsigned (positive) distance between a point in two-dimensional space with coordinates `px, py` and a line with equation `ax + by + c == 0`. Use `math.sqrt` (of type num -> float). Your function should have type `(num, num, num, num, num) -> float`.

We don't necessarily expect you to remember or rederive this formula; try Google if you need help. You might find the function `abs` useful.
