L8-2.3

Sum for Children

Nine-year old Gauss saw
30 numbers each 13 greater
than the previous one.
 (So the story goes.)

L8-2.4

Sum for Children

$$\begin{array}{l}
 1^{\text{st}} + 30^{\text{th}} = 89 + 466 = 555 \\
 2^{\text{nd}} + 29^{\text{th}} = \\
 \quad (1^{\text{st}} + 13) + (30^{\text{th}} - 13) = 555 \\
 3^{\text{rd}} + 28^{\text{th}} = \\
 \quad (2^{\text{nd}} + 13) + (29^{\text{th}} - 13) = 555
 \end{array}$$

L8-2.5

Sum for Children

Sum of k^{th} term and $(31-k)^{\text{th}}$ term
 is **invariant!**
 Total = $555 \cdot 15$
 $= (1^{\text{st}} + \text{last}) \cdot (\# \text{ terms} / 2)$
 $= ((1^{\text{st}} + \text{last}) / 2) \cdot (\# \text{ terms})$

L8-2.6

Sum for Children

Example:

$$1 + 2 + \dots + (n-1) + n = \frac{(1+n)n}{2}$$

Geometric Series

$$G_n ::= 1 + x + x^2 + \dots + x^{n-1} + x^n$$

$$xG_n = x + x^2 + x^3 + \dots + x^n + x^{n+1}$$

Geometric Series

$$G_n ::= 1 + \cancel{x} + \cancel{x^2} + \dots + \cancel{x^{n-1}} + \cancel{x^n}$$

$$xG_n = \cancel{x} + \cancel{x^2} + \cancel{x^3} + \dots + \cancel{x^n} + x^{n+1}$$

$$G_n - xG_n = 1 - x^{n+1}$$

Geometric Series

$$G_n ::= 1 + \cancel{x} + \cancel{x^2} + \dots + \cancel{x^{n-1}} + \cancel{x^n}$$

$$xG_n = \cancel{x} + \cancel{x^2} + \cancel{x^3} + \dots + \cancel{x^n} + x^{n+1}$$

$$G_n - xG_n = 1 - x^{n+1}$$

$$G_n = \frac{1 - x^{n+1}}{1 - x}$$

Geometric Series

$$G_n = \frac{1 - x^{n+1}}{1 - x}$$

Consider the *infinite* sum (series)

$$1 + x + x^2 + \dots + x^{n-1} + x^n + \dots = \sum_{i=0}^{\infty} x^i$$

Infinite Geometric Series

$$G_n = \frac{1 - x^{n+1}}{1 - x}$$

$$\lim_{n \rightarrow \infty} G_n = \frac{1 - \lim_{n \rightarrow \infty} x^{n+1}}{1 - x} = \frac{1}{1 - x}$$

Infinite Geometric Series

$$\sum_{n=0}^{\infty} x^n = \frac{1}{1-x}$$

for $x < 1$

L8-2.14

The future value of \$\$

I will promise to pay you \$100
in exactly one year,
if you will pay me \$X now.

Copyright © Albert R. Meyer and Ronitt Rubinfeld, 2005.

October 26, 2005

L8-2.15

The future value of \$\$

My bank will pay me 3% interest.

Define *bankrate*:

$$b ::= 1.03$$

-- the factor by which bank will
increase my holdings in 1 year.

Copyright © Albert R. Meyer and Ronitt Rubinfeld, 2005.

October 26, 2005

L8-2.16

The future value of \$\$

If I deposit your \$X for a year,
I will have $\$(b \cdot X)$.

So I won't lose money as long as

$$bX \geq 100.$$

$$X \geq \$100/1.03 \approx \$97.09$$

Copyright © Albert R. Meyer and Ronitt Rubinfeld, 2005.

October 26, 2005

L8-2.17

The future value of \$\$

- \$1 in a year is worth \$ 0.9709 today
- \$n is worth \$nr a year earlier,
where $r ::= 1/b$.
- So \$n paid in two years is worth
\$nr paid in one year, and is worth
\$nr² today.

Copyright © Albert R. Meyer and Ronitt Rubinfeld, 2005.

October 26, 2005

L8-2.18

The future value of \$\$

$\$n$ paid k years from now
is worth $\$nr^k$ today
where $r ::= 1/\text{bankrate}$.

Copyright © Albert R. Meyer and Ronitt Rubinfeld, 2005.

October 26, 2005

L.8-2.19

Annuities

I will pay you \$100/year for 10 years
if you will pay me \$Y now.

I can't lose if you pay me
 $100r + 100r^2 + 100r^3 + \dots + 100r^{10}$
 $= 100r(1 + r + \dots + r^9)$
 $= 100r(1-r^{10})/(1-r) = \853.02

Copyright © Albert R. Meyer and Ronitt Rubinfeld, 2005.

October 26, 2005

L.8-2.20

Annuities

I will pay you \$100/year for 10 years
if you will pay me \$853.02 now.

QUICKIE: If bankrates unexpectedly
increase in the next few years,

- A. I come out ahead
- B. You come out ahead
- C. The deal stays fair
