Demo #3: 4F Spatial Filtering Setup

Demo #3: 4F Spatial Filtering Scheme

Input Field: $g_{in}(x, y) = g_{illum}g_t$

Objective Lens Performs Fourier Transform

Field Before Pupil Plane: $g_{pp-}(x'', y'') \propto G_{in}\left(\frac{x''}{\lambda f_1}, \frac{y''}{\lambda f_1}\right)$

Spatial Filtering at Pupil Plane. Remove frequencies.

Field After Pupil Plane: $g_{pp+}(x'', y'') = g_{pp-}(x'', y'')g_{FP}(x'', y'')$

Collector Lens Performs Fourier Transform

Field at Output Plane: $g_{out}(x', y') \propto G_{pp+}\left(\frac{x'}{\lambda f_2}, \frac{y'}{\lambda f_2}\right)$

Demo #3: Field Through Objective Lens

Input Field: $g_{in}(x, y) = \left[\text{rect}\left(\frac{x}{\Lambda - d}\right) \text{rect}\left(\frac{y}{\Lambda - d}\right) \right] \otimes \left[\text{comb}\left(\frac{x}{\Lambda}\right) \text{comb}\left(\frac{y}{\Lambda}\right) \right]$

Field Before Pupil Plane: $g_{pp-} \propto \text{sinc}((\Lambda - d)u) \text{sinc}((\Lambda - d)v) \text{comb}(\Lambda u) \text{comb}(\Lambda v)$

$$g_{pp-} \propto \text{sinc}\left((\Lambda - d)\frac{x''}{\lambda f_1}\right) \text{sinc}\left((\Lambda - d)\frac{y''}{\lambda f_1}\right) \text{comb}\left(\Lambda\frac{x''}{\lambda f_1}\right) \text{comb}\left(\Lambda\frac{y''}{\lambda f_1}\right)$$

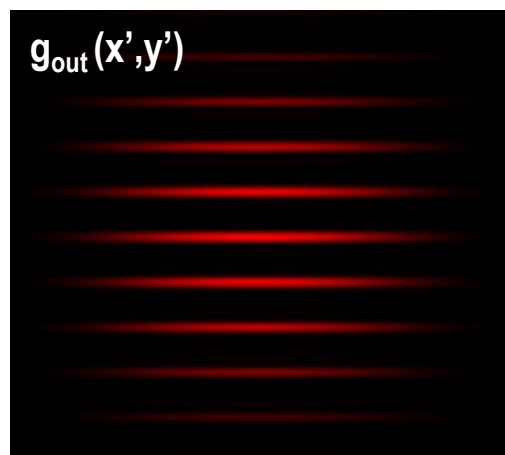

Comb functions in the x and y -directions. Sinc functions superimposed in x and y directions produce a cross pattern.

Demo #3: 4F Spatial Filtering and Output Field

Field After Pupil Plane: $g_{pp+} \propto \text{rect}\left(\frac{v}{a}\right) \text{comb}(\Lambda v) = \text{rect}\left(\frac{y''}{a\lambda f_1}\right) \text{comb}\left(\Lambda \frac{y''}{\lambda f_1}\right)$

Field at Output Plane: $g_{out} \propto \text{sinc}(a\lambda f_1 v) \text{comb}(\Lambda\lambda f_1 v) = \underbrace{\text{sinc}\left(a \frac{f_1}{f_2} y'\right)}_{\text{Since } a \text{ is small, sinc pattern has a large central lobe}} \underbrace{\text{comb}\left(\frac{1}{\Lambda} \frac{f_1}{f_2} y'\right)}_{\text{Recover near original comb period that has been magnified by } f_2/f_1}$

Since a is small,
sinc pattern has a
large central lobe

Recover near
original comb period
that has been
magnified by f_2/f_1
