

Problem Set 1

Feb 15

Please visit:

<http://www.cybergeography.org/atlas/atlas.html>

and look through the many visualizations organized on this site. Click through to the larger pictures, locate their home pages.

By Monday night at 10, post on MIT server (under Discussion) a couple of paragraphs describing which visualization you think provides the most meaningful account of the internet, and exactly why: what does it do well? What does it make meaningful? Why do other visualizations not do such a good job? What does it assume about the internet though? What definition of the internet does it suggest? What does it leave out?

Again, please use at least two concepts from the readings this week or last week's, to make your evaluation more specific.
